

Advaith Narayana Sarva

Hyderabad, India | advaitnaranayana.sarva_2027@woxsen.edu.in | +91 9381634530 | [linkedin.com/in/sarvaadvaithnarayana](https://www.linkedin.com/in/sarvaadvaithnarayana) | github.com/advaithsarva

PROJECTS

Text Analytics & Topic Modeling — 20 Newsgroups Corpus

Python, scikit-learn, spaCy, Jupyter

- Ran an end-to-end exploratory analysis over the 20 Newsgroups corpus: cleaning and lemmatization, TF-IDF vectorization with term-frequency analysis, LDA topic modeling, and KMeans clustering to test category separation.
- Trained a spaCy multilabel text-classification model on the cleaned corpus and compared its labels against the unsupervised cluster and topic assignments.

Artwork Registry — Relational Schema & SQL Backend

MySQL, Node.js, Express

- Designed a normalized 8-table MySQL schema (artwork, artist, provenance, financial, condition, location, images, documents) and wrote the query layer behind a REST API — multi-table joins, keyword search, publish-state filtering.
- Implemented record creation as a coordinated insert across seven related tables, keeping one submission consistent across provenance, valuation and condition records. Backend and schema complete.

MoneyPort — Financial Insights Dashboard

React, Recharts, Node.js, Express, Groq LLaMA-3.3-70B

- Built a finance dashboard turning salary, savings and investment inputs into visual breakdowns — a five-year projection bar chart and allocation/portfolio pie charts — served by a Node/Express API.
- Validated amounts and categories server-side before generating output, keeping malformed inputs out of the chart layer.

Document Data Extraction Pipeline (PDF/Image → structured JSON)

Python, Flask, React, OCR, spaCy

- Built a document-extraction service parsing PDFs and scanned images (PyMuPDF, OpenCV + Tesseract OCR) into cleaned, structured JSON — names, dates, addresses and key-value tables.
- Combined regex date patterns with spaCy named-entity recognition, with file-type/size validation and automatic cleanup after processing.

EXPERIENCE

AI Research Centre — Woxsen University, Intern

Feb 2024 – Apr 2024

- Built Django-based web modules and HTML/CSS frontend interfaces during a research-focused internship applying AI/ML methods to web-based tools.

CODE{X} — The Programming Club, Executive

Mar 2024 – Current

- Organize club-wide coding workshops and events to promote programming skills among Woxsen students.
- Collaborate with fellow club members to design and build software projects for the college community.

EDUCATION

Woxsen University — B.Tech, Computer Science (AI/ML)

Expected 08/2027

Hyderabad, Telangana, India | CGPA: 8.69 / 10

Saint Martin's University — International Exchange Student, BS Computer Science (AI/ML)

Aug 2025 – Current

Lacey, Washington, USA | GPA: 3.73 / 4.0

SKILLS

- Data Analysis & Statistics: Exploratory data analysis (EDA), data cleaning & preprocessing, descriptive statistics, TF-IDF/term-frequency analysis, topic modeling (LDA), clustering (KMeans), evaluation metrics
- Programming & Data Tools: Python (Pandas, NumPy, scikit-learn, spaCy), SQL (MySQL, PostgreSQL), Jupyter, Git/GitHub, Docker
- Databases & Data Modeling: Relational schema design, normalization, multi-table joins, query design, REST API data access
- Reporting & Communication: Chart-based dashboards (Recharts), structured JSON reporting, technical documentation
